

Your business. A working partnership.

Why we call ourselves Partners

We want to become your partner: understand what matters to you, bring clarity to uncertainty and help carry agreed improvements through. Behind every operation are people making decisions, carrying responsibility and building something worth protecting.

Our purpose

To help organisations see clearly, decide better and grow stronger through the practical application of risk, opportunity, resilience and insight. Our vision is a world where risk becomes a language spoken by everyone, enabling stronger organisations, better decisions and sustainable growth.

Who we work with

Individuals and organisations, the insured, insurers, brokers and underwriters. Our operational focus includes mining, manufacturing, supply chains, ports and rail. Each engagement is matched to its scope and the competence needed.

Three developed offerings

Risk Engineering, the Strategic Risk and Decision Office, and the Knowledge Center can be commissioned separately or combined around your needs. Security Visibility is a fourth capability in development, with scope and deliverables to be confirmed before it is offered.

Target dates

Knowledge Center launch target: 1 November 2026, with course availability confirmed before enrolment.
Consultancy service commencement: 1 January 2027.

Risk Engineering for the insurance conversation

The service and its purpose

A sound insurance decision starts with a clear view of the operation. We help insurers, underwriters and brokers build that understanding: the assets, how the business runs, the controls people rely on and the dependencies that could turn an event into a significant loss. We examine risks, threats and potential claim losses from asset damage and business interruption to give the insurance market a clearer basis for underwriting and placement decisions.

The deliverables

A scoped survey report explaining the evidence and conclusions, prioritised recommendations and an action register, and a close-out presentation. MFL and PML scenarios, follow-up reporting and connected continuity or learning support are commissioned separately where required.

Working with the insured

The insured provides requested pre-survey records, operational information and valuation inputs. Its portal supports requested uploads and valuation submissions; survey assessment and analysis remain with Targelis. Practical recommendations help the insured prioritise improvements.

The boundary

Scope, intended report users, assumptions, limitations and specialist input are agreed. The survey supports judgement without guaranteeing insurance acceptance, loss outcomes or statutory certification.

Your Strategic Risk Office facilitated, subscribed or combined

A partner for strategy and operations

We use risk and opportunity insight to inform and help strengthen executive strategy and operational plans. We can support your existing risk function, establish one, or take on the agreed function. The entire Strategic Risk Office or selected services can be facilitated.

Facilitated scope

Strategy support, Enterprise and Operational risk assessments, business continuity and disaster recovery planning, bow-tie analysis and critical control assessment. Measurements, inspections and actions help verify that critical controls remain effective.

Commissioned deliverables

Risk and opportunity registers, tolerances, treatment plans and actions, management reports and dashboards, leadership presentations, change records, bow-ties and critical control performance plans. Continuity work can provide impact and dependency analysis, recovery plans, activation and communication arrangements, and exercises.

Software subscription option

Authorised customers can manage their own risks and actions, submit evidence, view permitted dashboards and download released reports. The action owner submits completed work; the original assigner validates closure. Facilitated authoring functions, Finance and internal administration remain restricted. Features, fees and readiness are confirmed before activation.

Knowledge people can use

Self-paced online training

The Knowledge Center connects practical learning with the work people do. Individuals develop their practice, organisations develop their people, and insurance partners help the insured apply loss-prevention recommendations.

Six initial courses

Risk Management for Frontline Supervisors; Risk Management for Managers; Risk for the Executive; Critical Control Management through Bow Tie Analysis; Business Interruption and Continuity Planning; Advanced Enterprise Risk Management for Practitioners.

The learning deliverables

Assigned online course materials, practical activities, assessment and feedback within the written course offer. Organisations can commission learning plans and authorised progress reporting. Tailored facilitated sessions and workplace follow-up are separately agreed. Completion recognition reflects achieved course requirements and does not imply accreditation or automatic workplace competence.

Enquiry before enrolment

Select your courses through the website enquiry form. The Training Team replies with the detailed course brochures, outlines, enrolment requirements and next steps. Audience, industry and experience details support a relevant response and private grouped demand analysis.

A clear scope. Something you can act on.

How we work

Understand the purpose and boundaries, establish the evidence, review the findings and agree the next steps. We identify responsibilities, dates and deliverables. Reported completion remains distinct from validated closure.

Connected services

The survey can inform continuity priorities, risk insight can strengthen strategic choices, and learning can help people apply controls. Each service retains its agreed scope, evidence and accountable owners.

The next chapter: Security Visibility

This capability is in development. Its assessment methods, competence, delivery scope and customer deliverables are not yet offered as a confirmed service. We welcome discussion of priorities while that work takes shape. Specialist safety services require appropriate referrals, with partner arrangements confirmed before commitment.

Agree the engagement

We confirm required expertise, access, outputs, fees, timetable and review arrangements before appointment. Confidential information is handled under agreed sharing arrangements. Targetelis Partners is the contracting party; representative officers do not provide a personal guarantee. Statutory obligations are not waived.
